Front End Dev Project

Hotel Website Specification

The project is a web application for a Hotel that offers rooms, their restaurants and events which includes the following features:

- A burger menu that when clicked will show on the left side of the screen the menus:

    -About the Hotel
    -Rooms and Suites
    -Experience (Amenities)
    -Events *(Could Have)*

- Landing page with a header that has a header, body and a footer.

    The Header contains:
    The hotel logo and name, "Stay with Us", "Dine with Us", "Location", "Contact Us" and the "Offers" links.

    The Body contains:
    Images and short descriptions of the best features of the hotel.

    The Footer contains:
    The hotel logo and name, address and contact number, hotel certification, social media icons and company partner logos *(could have)*.

- Book a Room – the page shows the book a room form which contains the necessary information for booking a room.

    -Customer information
    -Calendar for date and time of reservation
    -List of all the rooms
        Each room has a short desc ription of the amenities of the room. Images of the room is laid out nicely in the room page. The images could also be presented in a carousel.
    -Number of guests
    -Local tax and service fee.

- Reserve a Table - the page shows the reserve a table form which contains the necessary information for reserving a table.

  -Customer information
  -Calendar for date and time of reservation
  -Option for the restaurants in the hotel
  -Number of guests
  -Menu
     Each course (or dish) has a short description. Images of the dish is laid out nicely in the menu page. The images could also be presented in a carousel.
  -Local tax and service fee.

- Offers – contains vouchers that the hotel offers.

- Location – contains the address of the hotel and a map.

- Contact Us – contains the contact information of the hotel where clients can reach them.

  Once the user proceeds with his booking or reservation the booking or reservation process should include the mobile number, request for each guest, indicate late or early check in or out, and special instruction should be included in the form. The application should also be able to get the total number of guests and the room each of the guest availed.
